DETAILED ACTION

Election/Restrictions

1. Claim 3-4 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 3 November 2005.

Information Disclosure Statement

2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Specification

3. The disclosure is objected to because of the following informalities: The disclosure refers to the claims by numbers (see page 7, for example). Applicant is required to amend the specification to remove these references and to incorporate into the disclosure the subject matter of these claims that is necessary to the understanding of the invention.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

It is also noted that inconsistent terminology is used throughout the claims. For example, claim 2, lines 7-8 state “an upper supporting member” and line 16 states “the upper side supporting member”. Applicant is required to review all claims for consistent terminology.

The term “type” in claims 1 and 2 is a relative term which renders the claim indefinite. The term “type” is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. Therefore, for the purpose of this examination, any “roll stock apparatus” will be considered.

Claims 1 and 2 are replete with lack of antecedent basis terminology. For example, claims 1 and 2, line 2, recite the limitation “the same”. Claim 2 recites the limitation “the two right and left points” in lines 4 and 9. There is insufficient antecedent basis for this limitation in the claim.

The above are examples only. Applicant is required to review all claims to ensure compliance with 35 USC 112.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1 and 2, as best understood, are rejected under 35 U.S.C. 102(b) as being anticipated by JP 61238640 (hereafter ‘640).

‘640 teaches a roll stock apparatus with lower and upper supporting members (see area of reference number 41a of Figure 1); each supporting member with two flat sides, the lower end of the lower supporting member provided with a projection lower end support surface supporting plate (see Figure 1, area below reference number 41a); the upper supporting member a longitudinal two-surface member having an obtuse angle at its horizontal sectional view.

Examiner notes that the claims are replete with intended use and function language.

A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. Furthermore, it has been held that the recitation that an element is “capable of” (can be) performing a function is not a positive limitation.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
